Stuff

GitHub

- Move java codebases to GitHub
- Removal of deploy to development from SVN Jenkins jobs coming soon

Maven & AITS Common Jars

- Common Jars allowed to deploy a framework without knowing what JARS are needed; that is maven

- Reduced from 53 in production to 27 in development

- Stopping more common jar setups

- Force use of maven

- Will no longer be updated

AITS Core

- Replaces aits-encryption-4_0, eas-4_2_GA_1, openeai-4_2_GA, sdiutil-3_0 common jar setups

- JDOM2

- First choice

AITS Core Legacy

- Replaces aits-encryption-4_0, eas-4_2_GA_1, openeai-4_2_GA, sdiutil-3_0 common jar setups

- JDOM1

- Second choice; only use after consulting with Jeff

addjars-maven-plugin

- Used to 'load' local jars into maven project

- Should try to eliminate it's usage

- Look for frameworks in main maven repo: https://mvnrepository.com/

- Use Eclipse dependency view

Logging Issues

- Log4j2 Vulnerability end of last year
- New log4j1 vulnerability
- Log4j1 end of life was 2015
- Category vs Logger
- Moving to log4j2

More automated deployment

- Part of Jim Caputo 'devops' initiative
- Working with Peter Herrig right now
- My goal any day and by other groups
- Focused on Java web apps with no database change
- Pull model vs push model
- Combine Jenkins and AppController
